

DEVICE COMPATIBILITY LIST

Cablelynx Broadband fully supports the cable modems listed below. Modems that are compatible with DOCSIS 3.0 specifications or greater will enhance the users' internet experience and provide the best results. Older modems, or modems not listed below, may work with the service, but they may not provide optimal results as they can negatively affect download and upload speeds.

Cablelynx will either provide a cable modem for a monthly rental fee, or subscribers may purchase a compatible device from an independent source for use on the system. Required maintenance and software upgrades or replacements are provided at no additional charge for any equipment rented from the company.
